Cleaning and Maintaining Antimicrobial Products

Products featuring antimicrobial protection still need to be cleaned. The BIOCOTE technology complements a regular cleaning schedule by reducing the levels of bacteria between cleanings

(1) Guidelines for day-to-day upkeep

For everyday cleaning, wipe the surface with warm soft water and mild neutral pH soap or detergent using a clean damp cloth or sponge.

After wiping, rinse with clean water and wipe the surface dry with a soft absorbent cloth. This ensures that streaky marks aren't left behind.

-  Do not drag rough items across the surface and be aware of grit trapped under other materials. This will spoil the finish and can cause scratches.
-  Do not rub with steel/wire wool or a metal brush or scrape with steel tools. This can scratch the surface.
-  Do not clean with high-pressure water. This may compromise the quality of the product.

Using incorrect cleaning products/methods can damage your Metlam Australia Antimicrobial product and void the Metlam Australia Warranty.
