

METLAM AUSTRALIA ANTIMICROBIAL COATED PRODUCTS CLEANING AND MAINTENANCE GUIDE

For everyday cleaning, wipe the surface with a damp soft cloth or sponge. You may also use a mixture of warm water and mild Neutral pH soap or detergent (such as PZ Cussons Morning Fresh).

After cleaning, wipe the surface dry with a soft absorbent cloth.

Please note, Antimicrobial Coated products are not impervious to harsh solvents and many commercial cleaning solutions will damage the finish. High pressure cleaning is not recommended as this may also compromise the quality of the product.

AVOID SCRATCHES

Antimicrobial Coated products can be scratched by careless handling or aggressive scrubbing. Avoid dragging rough items across the surface and be aware that grit, trapped under other materials, can actually cause surface scratches.

CHEMICAL REACTION

If left in contact with salts or acids for extended periods, Metlam Antimicrobial Coated products may be compromised. Applying a regular maintenance/cleaning schedule will minimise any potential problems.

Using incorrect cleaning products can damage your Metlam Australia Antimicrobial Coated products product and void the warranty.

AVOID:

- Rubbing with steel wool (wire wool) or scraping with steel tools
- Using scourers and cleaning cloths that have been used on ordinary steel
- Rubbing plastic scourers across the grain of brushed surfaces
- Using concentrated bleach or hydrochloric acid-based cleaning products
- Contact with products containing chlorine bleach, hydrochloric or muriatic acid
