

METLAM AUSTRALIA TOILET PARTITION HARDWARE CARE AND MAINTENANCE GUIDE

Retaining a great finish on Metlam Australia's Toilet Partition Hardware products are just a matter of a few simple steps. Ordinary household cleaner (with a Neutral pH) is usually all that is required keeping in mind the following guidelines:

- Metlam Toilet Partition Hardware looks best if it's cleaned regularly with a clean damp cloth.
- Drying afterwards makes sure streaky marks aren't left behind.
- Routine cleaning prevents any stubborn stains building up.

For more information on how to clean and maintain your Metlam Australia Products visit our YouTube Channel [here](#)

WHAT TO USE

For everyday cleaning, wipe the surface with a damp soft cloth or sponge. You may also use a mixture of warm water and mild Neutral pH soap or detergent (such as PZ Cussons Morning Fresh).

After cleaning, wipe the surface dry with a soft absorbent cloth.

Do not use bleach or commercial chemical cleaning agents – It will break down the coating on the hardware.

AVOID SCRATCHES

Metlam Toilet Partition Hardware can be scratched by careless handling or aggressive scrubbing.

Avoid dragging rough items across the surface and be aware that grit, trapped under other materials, can actually cause surface scratches.

CHEMICAL REACTION

If left in contact with salts or acids for extended periods, Metlam Australia Toilet Partition Hardware products may be compromised. Applying regular hygiene measures, like a maintenance/cleaning schedule, will minimise any potential problems.

Using incorrect cleaning products can damage your Metlam Hardware and void warranty.

TOTALLY AVOID

- Rubbing with steel wool (wire wool) or scraping with steel tools
- Using scourers and cleaning cloths that have been used on ordinary steel
- Rubbing plastic scourers across the grain of brushed surfaces

- Using concentrated bleach or hydrochloric acid-based cleaning products
- Contact with products containing chlorine bleach, hydrochloric or muriatic acid
